Alexander Philippopoulos

Software Developer

👤 Profile

I began learning to code at the age of 20 during my 3-year college diploma, starting with C#. Over time, I expanded into JavaScript, Java, and TypeScript. I learned to build websites, mobile apps, and games. I developed full-stack web apps using React, ASP.NET, and SQL Server Management Studio. For mobile, I used React Native with Supabase, and also Android Studio with Firebase and REST API integration. I also created games in C# and C++ using MonoGame, Unity, and Unreal Engine. My first job was at Evania Healthcare Clinic, where I developed a mobile application to assist with patients of the clinic.

💼 Employment History
